

High Pressure Filters

HD 044 · HD 064

Flangeable · Operating pressure up to 500 bar / 7250 psi · Nominal flow rate up to 105 l/min / 27.7 gpm

High Pressure Filter HD 064

Description

Application

In the high pressure circuits of hydraulic systems.

Performance features

Protection against wear:

By means of filter elements that even in full-flow filtration meet the highest demands regarding cleanliness classes.

Protection against malfunction:

Through installation near to the control valves or other expensive components. The specific determined flow rate guarantees a closed by-pass valve even at $v \le 200 \text{ mm}^2\text{/s}$ / 927 SUS (cold start condition).

Filter elements

Flow direction from outside to center.

The star-shaped pleating of the filter material results in:

- large filter surfaces
- > low pressure drop
- > high dirt-holding capacities
- Iong service life

Filter maintenance

By using a clogging indicator the correct moment for maintenance is stated and guarantees the optimum utilization of the filter life.

Materials

Filter head: Spheroidal graphite cast iron (SGI)

Filter bowl: Cold extruded steel
Coating: Powder paint
Seals: NBR (FPM on request)

Filter media: EXAPOR®MAX3 - inorganic multi-layer

microfiber web

Accessories

Electrical and / or optical clogging indicators are available - optionally with one or two switching points resp. temperature suppression.

Dimensions and technical data see catalog sheet 60.30.

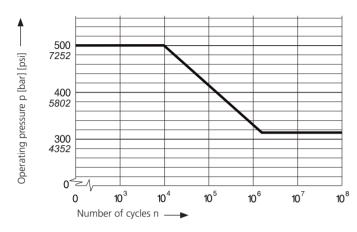

www.argo-hytos.com Page 345

Operating pressure

0 ... 315 bar / 4570 psi, min. 2 x 10^6 pressure cycles Nominal pressure according to DIN 24550

0 ... 500 bar / 7250 psi, min. 10⁴ pressure cycles Quasi-static operating pressure

Permissible pressures for other numbers of cycles

Nominal flow rate

Up to 105 l/min / 27.7 gpm (see Selection Chart, column 2) The nominal flow rates indicated by ARGO-HYTOS are based on the following features:

- closed by-pass valve at $v \le 200 \text{ mm}^2/\text{s} / 927 \text{ SUS}$
- element service life > 1000 operating hours at an average fluid contamination of 0.07 g per l/min / 0.27 g per gpm flow volume
- flow velocity in the connection lines:
 up to 250 bar ≤ 8 m/s / 3626 psi ≤ 26.3 ft/s
 > 250 bar ≤ 12 m/s / 3626 psi ≤ 39.4 ft/s

Filter fineness

5 μm(c) ... 16 μm(c) β-values according to ISO 16889 (see Selection Chart, column 4 and diagram Dx).

Dirt-holding capacity

Values in g test dust ISO MTD according to ISO16889 (see Selection Chart, column 5).

Hydraulic fluids

Mineral oil and biodegradable fluids (HEES and HETG, see info-sheet 00.20).

Temperature range

-30 °C ... +100 °C (temporary -40 °C ... +120 °C) -22 °F ... +212 °F (temporary -40 °F ... +248 °F)

Viscosity at nominal flow rate

- > at operating temperature: < 60 mm²/s / 280 SUS
- as starting viscosity: $v_{max} = 1200 \text{ mm}^2/\text{s} / 5560 \text{ SUS}$
- > at initial operation:

The recommended starting viscosity can be read from the diagram D (pressure drop as a function of the kinematic viscosity) as follows: Find the 70% Δp of the cracking pressure of the by-pass valve on the vertical axis. Draw a horizontal line so that it intersects the Δp curve at a point. Read this point on the horizontal axis for the viscosity.

Mounting position

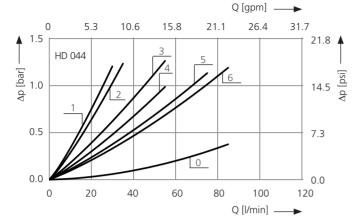

Preferably vertical, filter head on top.

Connection

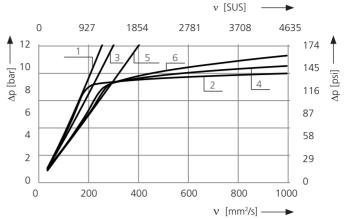

2 x Ø 15 mm / 2 x Ø 0.59 inch on plain flange For installation recommendations, see info sheet 00.325.

∆p-curves for complete filters in Selection Chart, column 3

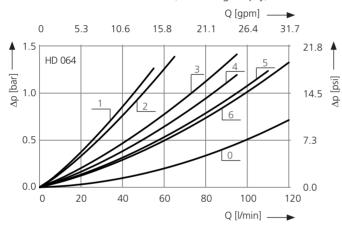

Pressure drop as a function of the **flow volume** at $v = 35 \text{ mm}^2/\text{s}$ / 162 SUS (0 = casing empty)

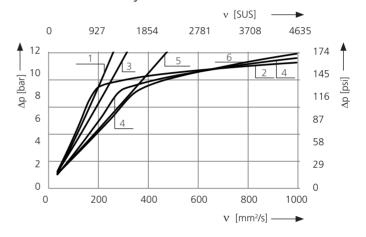

Pressure drop as a function of the **kinematic viscosity** at nominal flow

Pressure drop as a function of the **flow volume** at $v = 35 \text{ mm}^2/\text{s} / 162 \text{ SUS } (0 = \text{casing empty})$

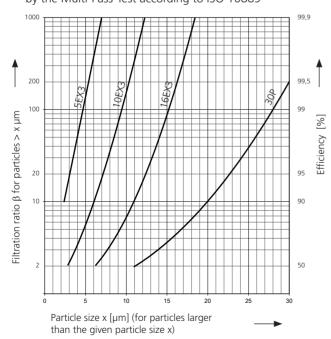

Pressure drop as a function of the **kinematic viscosity** at nominal flow

Filter fineness curves in Selection Chart, column 4

Filtration ratio β as a function of particle size x obtained by the Multi-Pass-Test according to ISO 16889

The abbreviations represent the following β -values resp. finenesses:

For EXAPOR®MAX 3 and Paper elements:

5EX3	=	$\overline{\beta}_{5 (c)}$	= 200	EXAPOR®MAX 3
10EX3	=	$\overline{\underline{\beta}}_{10 \text{ (c)}}$	= 200	EXAPOR®MAX 3
16EX3		$\underline{\overline{\beta}}_{16 \text{ (c)}}$	= 200	EXAPOR®MAX 3
30P	=		= 200	Paper

Based on the structure of the filter media of the 30P paper elements, deviations from the printed curves are quite probable.

For screen elements:

40S = screen material with mesh size $40 \mu m$ 60S = screen material with mesh size $60 \mu m$ 100S = screen material with mesh size $100 \mu m$ Tolerances for mesh size according to DIN 4189

For special applications, finenesses differing from these curves are also available by using special composed filter media.

¹ Preferred type, no minimum order quantity required

Optical or electrical clogging indicators can be provided for clogging monitoring. When ordering filters with clogging indicator for self-assembly, the abbreviation "M" must be used in the order designation of the clogging indicator. The corresponding installation accessories and installation instructions are included.

Order example: The filter HD 064-156 has to be supplied with optical clogging indicator - response pressure 5.0 bar / 73 psi.

Order code:	HD 064-156	/	DG 042-02 M
1. Part No. (Basic unit)			
2. Part No. Clogging indicator			

Suitable clogging indicators can be found in catalog sheet 60.30. These must be ordered separately and fitted by the customer. Installation instructions are enclosed.

Remarks:

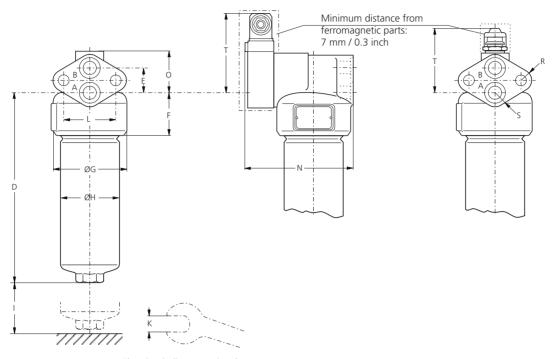

- > Filter versions without by-pass valves must always be equipped with a clogging indicator.
- > The filters listed in this chart are standard filters. If modifications are required, e.g. filter fineness 30P, we kindly ask for your request.

Page 348 www.argo-hytos.com

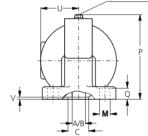

² Element differential pressure stable up to 160 bar / 2320 psi, clogging indicator is obligatory

Version with electrical clogging indicator DG 041

Version with optical clogging indicator DG 042

Clogging indicator optional: pressure holes plugged with screws

^{*}Not supplied with filter - has to be ordered separately

The functions of the complete filters as well as the outstanding features of the filter elements assured by ARGO-HYTOS can only be guaranteed if original ARGO-HYTOS spare parts are used.

Quality Assurance

Quality management according to DIN EN ISO 9001

To ensure constant quality in production and operation, ARGO-HYTOS filter elements undergo strict controls and tests according to the following ISO standards:

 ISO 2942 Verification of fabrication integrity (Bubble Point Test) ISO 2943 Verification of material compatibility with fluids ISO 3968 Evaluation of pressure drop versus flow characteristics ISO 16889 Multi-Pass-Test (evaluation of filter fineness and dirt-holding capacity) ISO 23181 Determination of resistance to flow fatigue using high viscosity fluid 	ISO 2941	Verification of collapse / burst pressure rating
ISO 3968 Evaluation of pressure drop versus flow characteristics ISO 16889 Multi-Pass-Test (evaluation of filter fineness and dirt-holding capacity)	ISO 2942	Verification of fabrication integrity (Bubble Point Test)
ISO 16889 Multi-Pass-Test (evaluation of filter fineness and dirt-holding capacity)	ISO 2943	Verification of material compatibility with fluids
· 5 1 3/	ISO 3968	Evaluation of pressure drop versus flow characteristics
ISO 23181 Determination of resistance to flow fatigue using high viscosity fluid	ISO 16889	Multi-Pass-Test (evaluation of filter fineness and dirt-holding capacity)
	ISO 23181	Determination of resistance to flow fatigue using high viscosity fluid

Before release into the series production the filter casing is tested for fatigue strength in our pressure pulse test rig. Various quality controls during the production process guarantee the leakfree function and solidity of our filters.

Illustrations may sometimes differ from the original. ARGO-HYTOS is not responsible for any unintentional mistake in this specification sheet.
